

NEXACCESS *Connections*

Whether you're a broadband service provider, government agency or corporate-style company, Nexaccess offers you a comprehensive range of future-focused, high performance telecommunication services.

Your network aggregation solution.

Perhaps you need the speed of corporate grade fibre optics or the affordable simplicity of ADSL or wireless connectivity: Nexaccess can empower you with a customisable array of broadband technologies, easily tailored to suit your particular telecoms or data transfer requirements. No matter your organisation's type, size or number of access locations, you'll discover that Nexaccess is renowned Australia-wide for:

- Flexible technologies that can evolve along with your bandwidth or access tail needs
- Coverage that's reliable and efficient, no matter your location
- Simple installation, maintenance and billing

Flexible.

With the technological landscape changing so rapidly, Nexaccess provides you with reassurance that you're using the latest and best tools for all your telecommunication needs. Moreover, we offer you simplicity and flexibility on pathways, componentry, hardware, service solutions and price all of which can be specified to optimise your location and coverage requirements. Add superior scalability plus seamless integration and you have even more control over the speed and bandwidth capabilities that best suit you.

Greater coverage.

As Nextep's principal focus is on providing industry-leading network services, Nexaccess is completely vendor-neutral. While our own network ranks among the best, we can also cherry pick from Australia's other Tier 1 carriers. This means you can benefit from business grade nationwide coverage virtually throughout Australia. The intention is that all your remote offices can access the same network speeds and efficiencies enjoyed by your headquarters.

All together. More simple.

The genius of Nexaccess is that it provides unlimited Network capability and, therefore, unrivalled adaptability that allows users to specify their own product and operational needs. It's real beauty, however, is that we deliver these class-leading access technologies via a single format; namely, a high-performing Ethernet connection that allows you to focus on your business and not fret over complicated technologies. Not only do we streamline all your multi-access tails for delivery, we simplify the ordering and installation process, too. You can depend on Nextep to efficiently handle all the background work and relationships, so you only have to deal with one single point of contact for admin and billing.

Technology.

Carried over our high availability ATM/Gig E national core network, Nexaccess broadband services range from copper, fibre and wireless technologies to last mile solutions including ADSL/ADSL2+/SHDSL and even 3G or WiMax. Our national network infrastructure is augmented with other third party access networks to ensure completely dependable national coverage with a core-target uptime of 99.99%.

The complete package.

Nexaccess is essentially the broad pathway that allows you to access the full suite of Nextep services including Nexnet, Nexconnect, Nextransit and Nexvoice. Backed by the resources of global technology giant NEC, Nextep's Nexaccess also provides:

- Freedom for channel partners to define and specify their product offering and operational requirements
- Highly reliable QoS options ranging from high-grade corporate to best effort internet
- Support: as well as our 24x7, dedicated help centre (1800 NEXTEP), we proactively work to optimise your user experience and benefits
- Class-leading technologies; as part of the worldwide telecommunications innovator NEC, Nextep operates as your organisation's telco partner and consultant

So, call Nextep today on **1800 NEXTEP** or email us at sales@nextep.com.au, to find out more about the savings, service, simplicity and support that makes Nexaccess your access point to a world of communications.

NEXACCESS ...and more

In addition to Nexaccess, Nextep provides a comprehensive suite of internet, data and voice technologies; each is customisable, upgradable, reliable and affordable. It's a great business move to trust Nextep and NEC; we're renowned for faster, more efficient ways of communicating and transacting.

Intelligent Connections

As Nextep puts a lot of thought into providing smarter ways to stay connected – with your customers, staff, suppliers and other stakeholders – we use the phrase 'intelligent connections' to explain our business. We can help you work smarter.

Streamline your telecoms sourcing by using one trusted, expert provider; it's less complication, less hassle and we make it worth your while. Whether you're a service provider, business or larger organization, Nextep solutions simply give you competitive, performance and productivity advantages.

Offering you more ways to stay connected

NEXNET Internet

Our wholesale Broadband Internet access options are designed to suit a diversity of Web requirements from business grade, high-end usage to more basic, static websites.

NEXCONNECT Private Network

For SME's and corporates with multiple sites and remote users, Nexconnect's Private Network provides an efficient and secure way of telecommunicating and file sharing at an affordable price.

NEXVOICE VoIP

Nexvoice provides IP-based telephony connections, which feature analytical tools and cost savings particularly for organisations with high call traffic requirements.

NEXTRANSIT Interconnect

If you're in the business of telecommunication services provision, Nextransit is a business grade layer 2 interconnect solution that lets you directly link to, monitor, and better manage your end customers' access services.

So, call Nextep today on **1800 NEXTEP** or email us at sales@nextep.com.au, to find out more about how we can help you create your own 'intelligent connections'
