

NEXTRANSIT *Interconnect*

If you're in the business of telecommunication services provision, Nextransit is a business grade layer 2 interconnect solution that lets you directly link to, monitor, and better manage your end customers' access services.

Accessible. Valuable.

With a network core target uptime of 99.99%, Nextransit is high on reliability and big on flexibility. It facilitates access to the full range of Nexaccess Ethernet tails including DSL, fibre, wireless and more traditional TDM-based transmission. As well as speeding up and prioritising your data transfer needs, it empowers you to 'value add' and customise your own applications and service offerings including high speed internet, private networking as well as video and voice over IP.

Choice. Quality.

Nextransit provides you with the choice of two, flexible interconnect options that let you 'plug-in' to the Nextep access network by a means best suited to your preferred access technology.

- **Nextransit ATMI** – interconnects via a standard ATM-based method
- **Nextransit ETHI** – interconnects via an Ethernet-based method

Whichever you prefer, the delivered outcome is a consistently high, QoS enabled platform ensuring high-uptime performance plus high configurable service guarantees.

More features. More customisable.

Nextransit ATMI enables committed bandwidth interconnection with guaranteed ATM QoS using Tier-1 ATM carriers or direct STM-1 connectivity. This high availability service allows you, our Channel Partner to become a 'Virtual Broadband Network Operator', capable of customising the end-user offer with your proprietary services and applications. This service requires a co-located or third party carrier-based ATM interconnect link provisioned into the Nextep network.

Nextransit ETHI enables cost-effective, high bandwidth Nextep interconnection of Ethernet-based transmission. Delivery is via Ethernet carriers or direct FE and GigE connectivity, co-located into the Nextep network. As with ATMI, you're able to operate as a virtual broadband provider utilising your proprietary services and applications, while also accessing cost-efficiencies and high scalability from 10Mbps to 1Gbps and above. Service eligibility for Nextransit ETHI requires a co-located or third party carrier-based Ethernet FE or GigE interconnect link provisioned into the Nextep network.

Empowering you.

Nextransit is a yet another example of Nextep's commitment to providing valuable and affordable 'intelligent connections'. Nextransit ATMI/ETHI services are easily installed and competitively priced, comprising of a one-time equipment and establishment fee, plus monthly service fees. We can supply and install the equipment for you or you can manage your own hardware and installation requirements if you prefer. Nextransit is designed to provide our Channel Partners with:

- Better management of their end customers' access services
- Facility to become Virtual Broadband Network Providers and 'value add' bespoke services
- Highly reliable network interconnection, with core target uptimes of 99.99%

So, call Nextep today on **1800 NEXTEP** or email us at sales@nextep.com.au, to find out more about the savings, service, simplicity and support that makes Nextransit your better choice.

NEXTRANSIT...and more

In addition to Nextransit, Nextep provides a comprehensive suite of internet, data and voice technologies; each is customisable, upgradable, reliable and affordable. It's a great business move to trust Nextep and NEC; we're renowned for faster, more efficient ways of communicating and transacting.

Intelligent Connections

As Nextep puts a lot of thought into providing smarter ways to stay connected – with your customers, staff, suppliers and other stakeholders – we use the phrase 'intelligent connections' to explain our business. We can help you work smarter.

Streamline your telecoms sourcing by using one trusted, expert provider; it's less complication, less hassle and we make it worth your while. Whether you're a service provider, business or larger organization, Nextep solutions simply give you competitive, performance and productivity advantages.

Offering you more ways to stay connected

NEXNET Internet

Our wholesale Broadband Internet access options are designed to suit a diversity of Web requirements from business grade, high-end usage to more basic, static websites.

NEXACCESS Connections

Whether you're a broadband service provider, government agency or corporate-style company, Nexaccess offers you a comprehensive range of future-focused, high performance telecommunication services.

NEXVOICE VoIP

Nexvoice provides IP-based telephony connections, which feature analytical tools and cost savings particularly for organisations with high call traffic requirements.

NEXCONNECT Private Network

For SME's and corporates with multiple sites and remote users, Nexconnect's Private Network provides an efficient and secure way of telecommunicating and file sharing at an affordable price.

So, call Nextep today on **1800 NEXTEP** or email us at sales@nextep.com.au, to find out more about how we can help you create your own 'intelligent connections'
